A-Table

DELICATE AND IN PERFECT SHAPE.

- » Discerning folding table for seminar and training rooms
- » The shape of its legs perfectly complements the A-Chair
- » Delicate look thanks to the bevelled, lightweight table top
- » Tried and tested one-hand operation of folding mechanism; unlatching at the push of a button
- » Maximum legroom thanks to new, tilting stacking buffers

The A: Setting a Clear Sign.

Delicate shape in perfection:
the A-Table.

Even at first sight, the A-Table shows true class, thanks to its unobtrusive, modern formal language. It makes a clear statement for discerning taste and style in any seminar or training room. At the same time, the delicate lines cleverly hide its functional complexity. For what you really don't see at first glance is that the A-Table is a folding table, easy to operate, and stackable. When set up, the frame is flush with the table top side, providing more legroom and a more appealing look – when any two tables are placed in a row, their legs seem to merge.

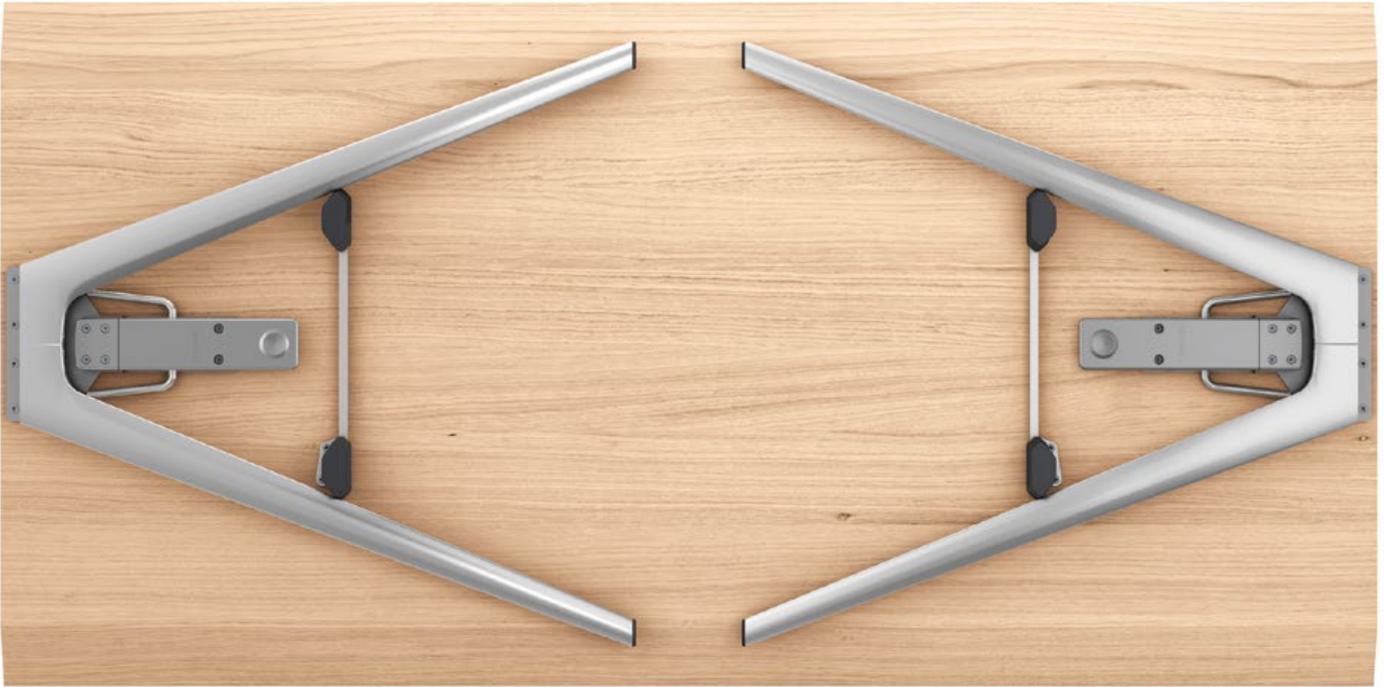

An Unbeatable Team.

A-Table and A-Chair.

Not only when placed in rows, but also as an individual ensemble, A-Table and A-Chair show that they are just made for each other. The table frame repeats the A of the chair frame. And like the A-Chair, the table legs are made of die-cast aluminium, turned spherical and tapered. This not only combines lightweight crowned construction with maximum stability, but also creates a harmonious unity of table and chair.

The bevelled light-weight table top and the frame with its spherical and crowned tapered legs perfectly match the A-Chair silhouette.

- A-Table folding mechanism**
- low-noise
 - maintenance- and wear-free
 - integrated failover of table legs

The newly developed stacking buffers only unfold under the shifting weight during stacking. Otherwise, they are tilted flat underneath the table top without interfering with leg room at all.
