Special rubber bands
Mounting screws

Ceiling metal pin - to be ordered separately

Assembling

Arrange the tiles into any shape you like. Connect the tiles together using the special rubber bands.

For large ceiling arrangements, we recommend you suspend them using wires fixed to the ceiling. Use the metal pins around the tile that the wires connect to. Do not connect the wires to the rubber bands. To secure larger arrangements, use more wires to the ceiling which will require more metal pins.

When creating a vertical installation use 2-3 metal pins per meter. When creating a horizontal installation use 2-3 metal pins per square meter. If the installation is curved or wavy use less metal pins to help achieve the curves.

Please contact us to order the metal pins. They are not included in the box.
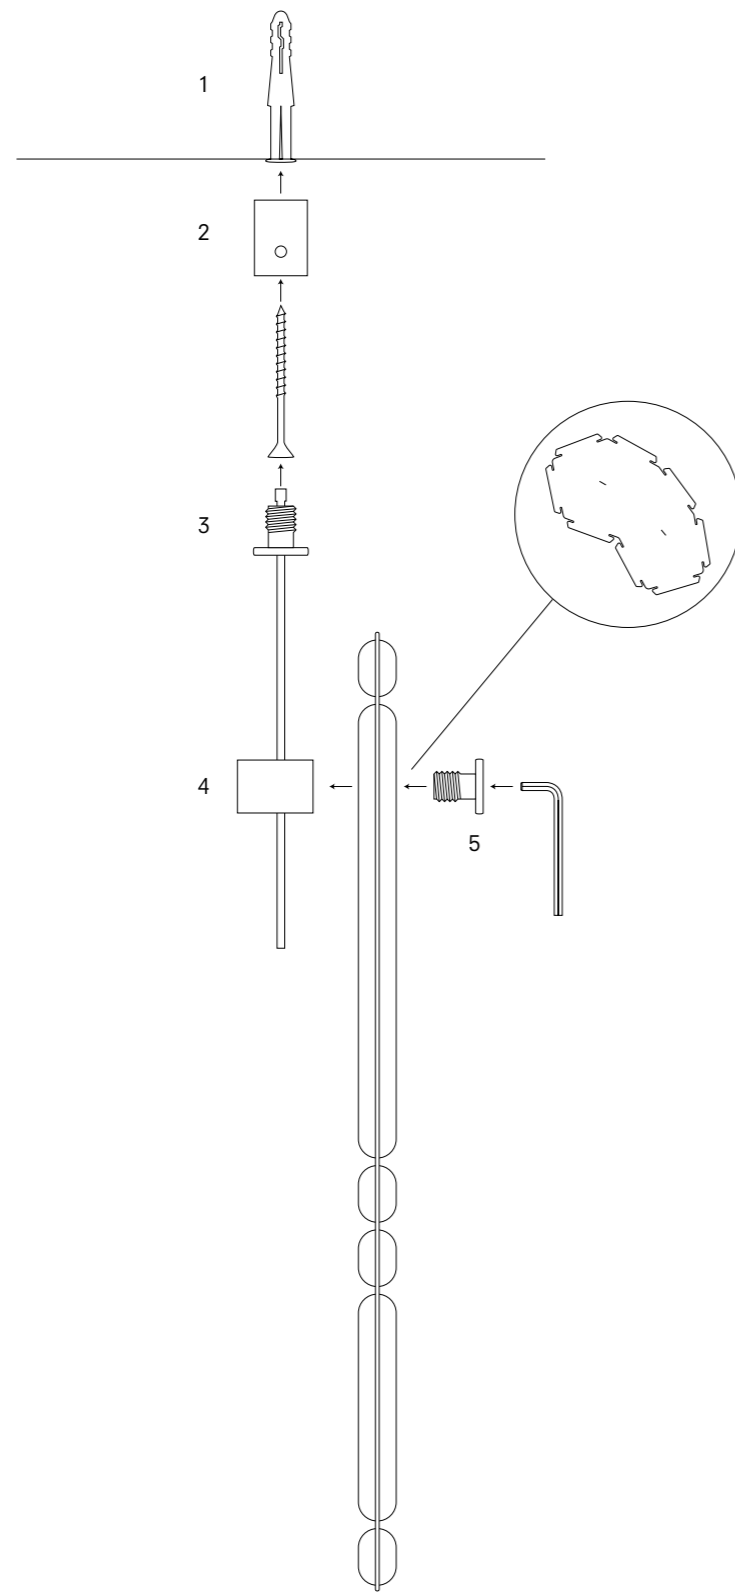

Large installation suspended by wires and secured by metal pins
